

Requirement Documentation From Workbook

Source workbook: [docs/All about the Product \(2\).xlsx](#)

This document converts the workbook's `App features` sheet into a requirements view with two sides:

- Client requirement: what the workbook asks for in the `Features` and `Details` columns.
- Current state: what is already implemented, based on the `Remarks (Code Gap)` and `Completion %` columns.

Summary

The workbook shows a mostly complete customer, shopkeeper, and admin foundation. The strongest gaps are in customer retention, social features, homepreneur-specific workflows, and a few advanced admin controls. Search, onboarding, offers, claims, redemption, subscriptions, and governance are already partially to mostly implemented.

Requirement Matrix

Customer

ID	Requirement	Current State	Completion
1	Login/logout with phone number or email	Implemented end-to-end with OTP, session restore, and logout	100%
2	Onboarding with mobile OTP and location auto-detect/manual override	OTP onboarding exists; location flow is partial	75%
3	Profile creation with name, address, and shopping preferences	Profile fields exist; preference capture is partial	70%

ID	Requirement	Current State	Completion
4	List shops in selected location by distance, paid priority, subscription tier, then alphabetically	Offer feed exists; strict shop ordering is partial	55%
5	Personalized offer discovery from preferences and browsing behavior	Offer feed and likes exist; deeper personalization is limited	45%
6	Nudges via campaign notifications, app events, and pop-ups	Notifications exist; event and pop-up strategy is partial	60%
7	Search and filter by category, distance, rating, price band, and trending items	Search/filter exists; rating, price, and trending views are incomplete	55%
8	AI intent recognition and recommendations for shopping queries	AI chat/intent routing exists; advanced recommendation depth is partial	50%
9	Explore shop profile with offers, catalog, ratings, and reviews	Public shop profile exists; catalog and reviews are incomplete	45%
10	Navigation to store with walking vs driving directions	Location features exist; dedicated navigation UX is limited	30%
11	Claim an offer using QR for later redemption	Claim and QR/coupon generation are implemented	90%
12	Close offer once shopkeeper accepts QR	QR/manual redemption flow is implemented	95%
13	View order history	History exists, but consolidated journey is partial	60%
14	Earn rewards from onboarding, purchase redemption, referrals, and likes	Coin rewards exist; welcome/referral rules are partial	55%
15	Customer retention through Bronze, Silver, and Gold tiers	Dedicated loyalty tiers are not fully implemented	20%

ID	Requirement	Current State	Completion
16	Customer dashboard showing supported local shops and coins collected	Dashboard and wallet exist; shop-support metric is partial	50%
17	Social features: photo reviews, favorite shops, WhatsApp sharing	Deal sharing exists; reviews and follow actions are mostly pending	25%

Shopkeeper

ID	Requirement	Current State	Completion
18	Login/logout with phone or email	Fully implemented with role-based access	100%
19	Self onboarding with mobile OTP and KYC/shop verification	Exists, but onboarding details can be hardened	85%
20	Select subscription tier: Basic, Growth, Premium	Subscription plans and entitlements are implemented	95%
21	Shop setup with profile, catalog, and visual merchandising	Shop profile and assets exist; catalog is partial	70%
22	Create offers with discounts, combo deals, start, expiry, and scheduling	Offer lifecycle is implemented end-to-end	95%
23	AI banner creation	AI banner generation and credit usage are implemented	95%
24	Campaign management for trending placement, WhatsApp, and followers	Campaign creation exists; trend/follower logic is partial	70%
25	Redemption via customer QR scan and redemption history	Redemption flows are implemented	95%
26	Insight dashboard for traffic, likes, redemptions, revenue, and visits	Key stats exist; deeper intelligence is partial	65%
27	Rewards for referrals and redemptions	Rewards exist; referral automation is partial	50%

ID	Requirement	Current State	Completion
28	Direct walk-in routing through the app	Manual/QR closure supports walk-ins; referral loop is partial	40%

Homepreneur

ID	Requirement	Current State	Completion
29	Login/logout with phone or email	Not a separate first-class role yet	35%
30	Self onboarding with KYC details	Mostly pending as a separate flow	30%
31	Subscription tier selection	Mostly pending as a distinct persona flow	30%
32	Business setup with profile, catalog, and merchandising	Mostly pending as a separate module	30%
33	QR code for receiving payment	Dedicated payment QR flow is largely pending	20%
34	Offer setup with discounts, combo deals, and scheduling	Exists only indirectly via shopkeeper parity	30%
35	AI banner creation	Not separated; partial through shopkeeper flow	30%
36	Campaign management	Mostly pending as a separate persona module	25%
37	Insight dashboard	Mostly pending as a separate persona module	25%
38	Rewards for referrals and redemption	Largely pending	20%
39	Direct walk-in routing and referral workflow	Largely pending	20%

Sales

ID	Requirement	Current State	Completion
40	Sales login/self onboarding with profile details	Exists through sales-agent roles and governance	75%
41	Onboard shopkeeper or homepreneur with subscription	Lead onboarding services exist	80%
42	Subscription and payment with a 12-month mandate	Partial; mandate workflow is not explicit	35%
43	Analytics by pincode, including attribution to the logged-in sales person	Partial sales analytics and attribution exist	70%
44	Incentive data	Partial support through rewards and metrics	40%

Analytics and Admin

ID	Requirement	Current State	Completion
45	Analytics dashboard showing shops, homepreneurs, and customers by city and pincode	User/shop counts exist; analytics UI is partial	70%
46	Shop approval	Implemented	100%
47	Banner approval	Mostly pending	25%
48	Campaign approval	Partial	35%
49	Coupon monitoring	Implemented	100%
50	Regional dashboard	Partially available	65%
51	Payment monitoring	Partial	60%
52	Pricing engine	Largely implemented	80%
53	Premium filter setup	Mostly pending	30%
54	Channel multiplier	Partial	65%

ID	Requirement	Current State	Completion
55	Subscription fee	Largely implemented	90%
56	Coupon creation	Implemented	100%
57	Agent management	Implemented	100%
58	Revenue dashboard	Exists; deeper finance analytics can improve	70%
59	Customer analytics	Partial	60%
60	Fraud detection	Partial	50%
61	Notification system	Exists; richer push/event orchestration is partial	70%

Additional Customer and Shopkeeper Items

ID	Requirement	Current State	Completion
62	Customer banner interaction analytics	Banner display exists; interaction analytics is partial	55%
63	Customer notifications inbox with unread/read states	Implemented	90%
64	Shopkeeper pricing preview	Implemented	80%
65	Shopkeeper payment	Implemented	90%
66	Shopkeeper coupon issue	Implemented	90%
67	Shopkeeper performance tracking	Partial	75%
68	Shopkeeper unique code for coupons/redemption	Implemented	85%
69	Shopkeeper shop referral	Partial	60%
70	Shopkeeper incentive earning	Partial	70%

Gaps To Prioritize

1. Customer retention and loyalty tiers.
2. Homepreneur as a first-class persona with full onboarding, subscription, campaign, dashboard, and rewards flows.
3. Customer social features, especially photo reviews and favorite-shop following.
4. Search, ranking, and personalization improvements for offers and shops.
5. Admin approval workflows for banners and campaigns.
6. Stronger analytics and fraud controls across customer, shopkeeper, and sales journeys.

Delivery Timeline Estimate

Assumption: this estimate is for completing the remaining client-facing requirements in the workbook with an active product/design/dev workflow and no major scope expansion.

Overall Estimate

- Final delivery timeline is fixed at 45 days from the planned start date (April 8, 2026).
- The phase split below divides the 45 days across feature delivery, hardening, and stabilization.

Suggested Phases

Phase	Focus	Estimated Time	Calendar Range
Phase 1	Customer gap closure: retention tiers, social features, stronger search/filtering, shop profile completion	12 days	First 12 days
Phase 2	Homepreneur as a first-class persona: onboarding, subscription, business setup, QR payment, offers, campaigns, dashboard	15 days	Next 15 days
Phase 3	Admin and analytics hardening: banner/campaign approval, fraud detection, premium filters, reporting improvements	10 days	Next 10 days
Phase 4	QA, bug fixing, regression testing, and release stabilization	8 days	Final 8 days

Practical Delivery View

- Target completion window (45-day plan): end of Day 45 from project kickoff.
- If scope increases during execution, phase boundaries should be re-baselined but the current plan assumes strict scope control.

Notes

- Some workbook rows describe aspirations rather than finished tickets, so the completion percentage is the best indicator of implementation state.
- A few entries use wording like "shop" while the product flow uses "offers"; those should be normalized in the final product spec before implementation planning.
- The workbook mixes implemented functionality with roadmap ideas, so this document should be treated as a requirements baseline, not a release plan.
