

MyOffers Client Operations Guide

1. Executive Snapshot

MyOffers is a multi-role hyperlocal commerce platform that connects customers, shopkeepers, field agents, and platform operators in one operating system for local offers, lead conversion, subscriptions, campaigns, rewards, and redemptions.

Who it serves

Group	Why they use MyOffers
Customers	Discover nearby offers, claim deals, redeem coupons, earn rewards, access loan flow, get AI help
Shopkeepers	Onboard, subscribe, publish offers, run campaigns, redeem customer claims, buy AI credits
SSA / CSA	Create and manage shop leads, influence onboarding, apply coupon-linked acquisition
Subadmin	Run operations, users, analytics, reports, subscriptions, and coupon governance
Super Admin	System oversight, shop visibility, audit control, agent creation, coupon activation control

Revenue and engagement model

- Shopkeeper subscription plans drive recurring revenue.
- Free starter and trial layers reduce onboarding friction.
- Campaigns create usage-based monetization.
- AI credit packs extend paid value beyond subscription limits.
- Coupon-linked lead onboarding supports agent-driven acquisition.
- Claims, redemption, and coin rewards improve repeat usage.

Current business value

- One app stack supports 6 operating roles.

- Lead-to-subscription flow is connected, not manual.
- Shopkeeper growth is tracked through agents, coupons, and governance.
- Customer offer discovery is location-first and claim-aware.
- Redemption closes the business loop from offer to sale.
- Rewards add retention for both customer and shopkeeper.
- AI already supports customer help and shopkeeper AI-credit journeys.
- Campaigns are live for in-app inbox delivery and queued expansion.

2. Product at a Glance

Role	Access / Landing	Main screens	Key actions	Business purpose
Super Admin	Dedicated super admin flow	Dashboard, shops, users, audit, agent governance	View system metrics, create SSA/CSA, track coupon activations, manage caps	Central control and compliance
Subadmin	Admin dashboard	Dashboard, users, analytics, reports, subscription governance, coupon governance	Manage users, approve/reject shops, monitor platform, manage plans	Day-to-day platform operations
Company Sales Agent	CSA dashboard	Leads, shops, reports, coupons	Create leads, retry invite OTP, drive onboarding with coupon attribution	Sales-led acquisition
SSA	Customer entry with SSA switch	SSA home, shopkeepers, profile	Create leads, share coupon code, retry invites, track conversions	Field onboarding and local expansion
Shopkeeper	Onboarding then shop dashboard	Dashboard, offers, campaigns, loans, shop tab	Complete onboarding, subscribe, create offers, run	Merchant growth and monetization

Role	Access / Landing	Main screens	Key actions	Business purpose
			campaigns, redeem coupons, buy AI credits	
Customer	Customer dashboard	Home, offers, claims, loans, favorites, profile, chatbot	Discover offers, like, claim, redeem, earn rewards, apply for loan, become SSA	Demand generation and repeat engagement

3. Basic Technical Foundation

Layer	Current foundation	Why it matters
Client	Flutter app	One app experience across roles
Backend	Node.js + Express	Central business logic and role routing
Database	PostgreSQL + Prisma	Structured role, offer, subscription, campaign, loan, reward, and claim data
Identity	OTP login + JWT + role checks	Fast onboarding with controlled access
Engines	Subscription, campaign, reward, claim/redemption, loan, AI	Converts discovery into governed business flows
Integrations	Gemini AI, Cloudinary uploads, rate limits, coupon governance	Adds support, assets, and operational control

4. Unified Login and Role Routing

Routing notes

- customer lands on customer dashboard.
- shopkeeper enters onboarding until profile and subscription state are ready.
- ssa can operate in SSA mode and still has customer capability.
- company_sales_agent lands on CSA dashboard.
- subadmin lands on admin dashboard.
- super_admin has higher-order governance flows.

5. Role-Wise Flows

5.1 Super Admin

Objective: full-system control, agent network governance, and coupon oversight.

Entry: privileged admin login.

Default landing: super admin dashboard.

Area	What the role sees / controls
Analytics	users by role, total shops, subscription status mix, MRR, activity
Shop oversight	shop list with subscription view, filters by location and category
Audit	audit trail visibility
Agent governance	create and view SSA / CSA
Coupon control	coupon activations, discount distribution, governance settings
Policy control	max coupon discount cap at agent level

5.2 Subadmin

Objective: run platform operations without full super admin scope.

Entry: admin login.

Default landing: admin dashboard.

Area	What it covers
User operations	list users, inspect user detail, filter by role/location/category
Shop approval	approve or reject pending shopkeepers
Analytics	platform-level dashboards
Reports	reporting screens
Subscription governance	manage plans, subscriptions, analytics, renewals, cancellations

Area	What it covers
Coupon governance	agent and coupon oversight

5.3 Company Sales Agent

Objective: create shopkeeper pipeline and convert leads into active merchants.

Entry: CSA login.

Default landing: CSA dashboard.

Area	Operational meaning
Lead creation	capture shop, owner, phone, location, notes, coupon
Invite retry	resend OTP invite when onboarding stalls
Coupon influence	coupon can be attached at acquisition stage
Pipeline visibility	track open, contacted, converted, or failed invite states
Shop tracking	see connected shop base

5.4 SSA

Objective: field-led merchant onboarding with dual customer + agent capability.

Entry: customer-to-SSA upgrade or direct SSA login.

Default landing: customer dashboard or SSA dashboard after switch.

Area	Operational meaning
SSA onboarding	customer becomes SSA with pincode and contact details
Role switching	can move between customer experience and SSA workflow
Lead handling	create leads, track invite status, retry OTP
Coupon use	show and share assigned coupon codes
Shop tracking	view onboarded shops and lead movement

5.5 Shopkeeper

Objective: become an active merchant, publish deals, run campaigns, redeem claims, and grow via subscription.

Area	Operational meaning
Registration	direct signup or lead-linked invite
Onboarding	profile completion, terms, business details
Free/trial funnel	auto-trial where eligible, free starter fallback, paid upgrade path
Subscription	plan quote, coupon application, payment, plan activation
Offer management	create, edit, view, delete offers
Campaign usage	audience targeting, cost estimation, draft, pay, queue, launch
Redemption	verify and redeem customer claims via QR or manual flow
AI credits	use plan allowance and buy extra credit packs
Rewards	earn shopkeeper coins and redeem milestones
Loans	capital-loan tab available in shop flow

5.6 Customer

Objective: discover local value, claim deals, redeem them in-store, and stay engaged.

Area	Operational meaning
Home anMyOffers	location-first feed, categories, likes, featured paths
Claims	active claimed deals with QR payload and coupon code
Favorites	likeMyOffers and saved discovery
Redemption outcome	redeemed claims update state and trigger reward flow
Wallet visibility	reward balance and history screens
AI help	chatbot for offers, coupons, savings, and support
Loans	submit and track loan applications
SSA path	become SSA from customer journey

6. Cross-Role Business Journeys

6.1 Lead to Shopkeeper Onboarding

6.2 Coupon Capture to Subscription Payment

6.3 Offer Publish to Customer Claim

6.4 Claim to Redemption to Coin Rewards

6.5 Campaign Lifecycle

Inbox delivery / campaign
analytics

6.6 Customer Loan Inquiry Flow

6.7 AI-Assisted Journey

6.8 Free / Trial to Paid Conversion

7. Module Snapshot

Module	Purpose	Main users	Status
Auth	OTP login, role routing, access control	All roles	Live
Onboarding	shopkeeper profile completion and readiness	Shopkeeper, agents	Live
Offers	create, browse, like, manage offers	Shopkeeper, customer	Live

Admin governance	users, reports, analytics, plan control	Subadmin, super admin	Live
WhatsApp campaign delivery	multi-channel campaign expansion	Shopkeeper	In rollout

Module	Purpose	Main users	Status
Email / push campaign delivery	additional outbound channels	Shopkeeper	Announced

8. Current State and Business Readiness

Live today

- OTP-based role entry and role-specific dashboards.
- Lead creation with invite retry and coupon-linked acquisition.
- Shopkeeper onboarding with trial / free / paid subscription paths.
- Offer publishing, customer like/favorite behavior, and claim creation.
- Coupon verification and redemption with reward payout.
- Coin wallet, ledger, milestone, and admin reward controls.
- Customer AI chatbot using Gemini.
- Shopkeeper AI credit wallet and extra pack purchase flow.
- Campaign drafting, audience estimation, payment, queueing, and in-app inbox delivery.
- Loan application intake with statement upload and consent capture.

Recently added / stabilizing

- Campaign analytics gated by plan entitlements.
- Rewards operations and maintenance workflows.
- Claims, QR payload, and redemption-linked payout consistency.
- AI-credit monetization alignment with subscription tiers.
- Trial and free-funnel enforcement across merchant features.

Reserved for next phase

- Fully live omnichannel campaign delivery beyond in-app inbox.
- Push-notification device pipeline and delivery orchestration.
- Stronger AI content generation and operational copilots.
- Deeper predictive analytics for churn, fraud, and performance actions.
- Better navigation handoffs from AI into exact app actions.

9. Operations Notes

- Campaign channels are not equal today: `app_inbox` is live, while broader outbound expansion is still phased.
- Shopkeeper access is feature-gated by subscription status.
- Customer claim and redemption are now part of the core closed-loop commerce flow.
- SSA and CSA are acquisition roles; shopkeeper value starts when onboarding converts into active subscription and offer usage.
- Older documents that describe campaigns, AI, or rewards as "planned" are no longer the correct baseline for client communication.
