

D'Offers – Role Wise Complete Development Plan

This document defines complete system development structured role-wise and divided into execution subphases. The objective is controlled scalability, monetization stability, and structured feature rollout.

1. SUPER ADMIN (System Governance Layer)

Super Admin must be completed first as all configuration and monetization control flows from this role.

SA-1: Core System Control

- View all users
- Activate / deactivate users
- View all shops
- Monitor subscription status
- View basic revenue summary

SA-2: Subscription Governance

- Define category-based pricing
- Update subscription plan pricing
- Enable / disable plans
- View active vs expired subscriptions

SA-3: Agent & Coupon Governance

- View SSA list
- View Company Sales Agent list
- Track coupon activations
- Monitor total discounts distributed
- Track onboarding count per agent

SA-4: System Intelligence Monitoring

- Trigger notification campaigns
 - View pincode-wise analytics
 - View category performance
 - Monitor conversion ratios
-

2. SUBADMIN (Operational Execution Layer)

Subadmin manages operational moderation and monitoring.

SUB-1: Offer Moderation

- Approve / reject offers
- Update offer status
- Flag expired offers

SUB-2: Shop Monitoring

- View shop activity
- Monitor subscription compliance
- Identify inactive shops

SUB-3: Performance Monitoring

- View SSA performance
 - View Company Agent performance
 - Track shop growth metrics
-

3. COMPANY SALES AGENT (Payroll Role)

This role focuses on physical merchant acquisition.

CSA-1: Dashboard Foundation

- View personal onboarding count
- Track monthly target progress
- View incentive summary (if applicable)

CSA-2: Shop Onboarding Tools

- Register shop with agent reference
- Track referred shops
- View subscription status of onboarded shops

CSA-3: Performance Reporting

- Monthly onboarding report
- Active vs churned shops
- Commission tracking summary

4. SALES SERVICE AGENT (SSA – Growth Engine)

Independent incentive-based onboarding partner.

SSA-1: Registration & Code Generation

- SSA registration flow
- Auto-generate unique redeem code
- Display redeem code in dashboard

SSA-2: Referral Tracking

- View shops onboarded via code
- Track coupon activation count
- Monitor earned incentives

SSA-3: Incentive Wallet (Future-Ready)

- Track total earnings
- Withdrawal request system (future phase)
- Incentive transaction history

5. SHOPKEEPER (Revenue-Critical Role)

Strict control required to ensure subscription-based monetization.

SH-1: Onboarding Lock System

- Business profile completion mandatory
- Terms & Conditions acceptance required
- Subscription activation required before dashboard access

SH-2: Offer Management System

- Create offer
- Upload images
- Set discount percentage
- Set validity date
- Activate / deactivate offer

SH-3: Growth & Branding Tools

- AI banner generation
- Offer performance analytics (views, likes)
- Paid promotion option (future)

SH-4: Subscription & Billing Management

- View active plan
 - Renew subscription
 - Apply coupon during checkout
 - View payment history
-

6. CUSTOMER (Discovery & Engagement Role)

End-user interaction and hyperlocal intelligence consumption.

CU-1: Basic Discovery Engine

- Pincode entry (mandatory)
- View registered shops count
- View offer listing

CU-2: Smart Filtering Layer

- Category filter
- Gender filter
- Age group filter
- Sort by discount

CU-3: Engagement Features

- Like offer
- Save offer
- Request callback
- Share offer

CU-4: Notification System

- In-app alerts
 - WhatsApp alerts
 - Offer expiry reminders
-

Recommended Execution Order

1. Super Admin (SA-1, SA-2)
 2. Shopkeeper (SH-1 – Subscription Lock)
 3. SSA (SSA-1, SSA-2)
 4. Company Sales Agent
 5. Customer (Basic Discovery)
 6. Subadmin Moderation
 7. Advanced AI & Analytics Layer
-

Strategic Execution Principle

Revenue Control → Merchant Onboarding → Referral Growth → Customer Discovery → Operational Monitoring → Intelligence Optimization

This structured role-wise approach ensures scalability, monetization stability, and systematic hyperlocal expansion.

Development Timeline with AI Integration

Below is a practical execution timeline assuming focused development with parallel frontend + backend execution.

Phase Duration Overview

- Super Admin Core: 1 Week
- Shopkeeper Subscription Lock: 1–2 Weeks
- SSA + Company Agent System: 1 Week
- Customer Discovery Engine: 1–2 Weeks
- Subadmin & Moderation Layer: 1 Week
- AI Automation & Intelligence Layer: Continuous (Starts Week 2 onward)

Total Initial System Stabilization Timeline: 6–8 Weeks

AI Integration Across Every Phase

AI is not a separate feature. It is embedded across the platform.

1. Super Admin – AI Governance Layer

AI Usage: - Revenue forecasting predictions - Shop churn prediction model - Category growth trend analysis
- Automated anomaly detection in subscriptions

Timeline: Week 1–2 (basic analytics AI), advanced intelligence post Week 6

2. Shopkeeper – AI Assisted Commerce

AI Usage: - AI banner generation (auto design creatives) - Smart discount suggestion based on category trends - Best time-to-post offer recommendation - Offer performance prediction score

Timeline: - Subscription lock: Week 2 - AI creative system: Week 4–5 - Predictive optimization: Post Week 6

3. Sales Service Agent (SSA) – AI Growth Optimization

AI Usage: - Performance scoring of agents - Smart territory recommendation (which pincode to target) - Incentive optimization based on conversion rate

Timeline: Week 3 basic tracking, advanced AI scoring Week 6+

4. Company Sales Agent – AI Assisted Targeting

AI Usage: - Suggested shop leads based on category gaps - Area heatmap intelligence - Performance benchmarking AI

Timeline: Week 3–4 basic dashboard, Week 6 advanced intelligence

5. Customer – Hyperlocal Intelligence Engine

AI Usage: - Personalized offer ranking - Behavior-based recommendation engine - Gender + age + category preference modeling - Smart notification timing prediction

Timeline: - Basic filtering: Week 4 - Personalized ranking AI: Week 6–8

6. Subadmin – AI Moderation Assistant

AI Usage: - Automated offer validation - Suspicious discount detection - Duplicate offer detection - Content moderation AI

Timeline: Week 5 basic moderation, Week 7 automation

Continuous AI Strategy

AI should operate in three layers:

1. Predictive Layer – Forecast revenue, churn, and growth.
2. Recommendation Layer – Personalize offers and optimize discounts.
3. Automation Layer – Reduce manual moderation and campaign effort.

AI is integrated progressively, not delayed until the end.

Final 8-Week Strategic View

Week 1: Role system + Admin control Week 2: Subscription enforcement + initial analytics Week 3: SSA + Agent system Week 4: Offer engine + customer basic discovery Week 5: AI banner + moderation AI Week 6: Personalized recommendation engine Week 7: Predictive analytics + agent optimization Week 8: Performance tuning + intelligence refinement

Execution Principle: Build revenue foundation first, integrate AI in parallel, then scale intelligence progressively.

The goal is to position D'Offers not just as a discount platform, but as an AI-native hyperlocal commerce intelligence system.
